**Subject:** North Fork Gunnison River Valley and Forest Gas Development Objection

I object to the proposed gas fracking, disruption of the land and use of significant amounts of water that is needed for our population, wildlife and agriculture of the sensitive areas in the North Fork Valley and in Gunnison National Forest Lands

My name is Elizabeth Large, Address is 603 Parkplace Port Aransas Texas 78373  
Phone 361-960-9797

I am emailing and can't provide a scan of my signature, ( it seems like this is intentionally made difficult for citizens to register their feedback ).

I have attended a few meetings and signed in attendance and have kept up with CHC's work opposing this, thru Internet.

- Name of the proposed project: Dual Operator Proposal: Development of 25 Federal Natural Gas Wells and Associated Infrastructure on 5 Multi-well Pads;
- The name and title of the responsible official: Scott Armentrout, Forest Supervisor;
- The name of the forest and ranger districts on which the proposed project would be implemented: Grand Mesa, Uncompahgre, and Gunnison National Forest, Paonia Ranger District

I am opposed to this as it will disrupt the natural resources of the area, even though it has been promised time after time by this industry that there will be no harm. This lie has been repeated on this continent since white men swept through and wiped out the native inhabitants. The area of the North Fork of the Gunnison River Valley and forest is rich in farming, agriculture, recreation, fishing, hunting, winter and summer tourism and the area is growing in population. It's a rich, fertile area, full of wildlife and vital to food production and economic health.

There needs to be an Environmental Impact Statement which is required when a federal action will or MAY affect the quality of the environment. (This is a given fact, that this activity WILL significantly affect the environment, as it has, anywhere else it's been done).

Additionally, the Resource Management Plan is so old, how can this be the foundation for oil and gas development?
